National Marine Data Center - expert positions

A full-time expert positions for acquisition, archiving and distribution of marine data is now open at the Israel Oceanographic & Limnological Research (IOLR).

Scientific field: Oceanographic data and information exchange (physical/chemical/biological/sedimentological).

Job Description: A highly motivated independent expert/scientist in the field of oceanographic data and information exchange. The position requires knowledge in operating and analyzing modern database and web methodologies and GIS infrastructure. A background in the following is required: data base admin (DBA) for SQL server; web developer and interface design in asp.net environment; GIS developer; modeling of marine systems (advantage).

It is anticipated that the successful candidate will cooperate with ongoing research projects at the National Institute of Oceanography, IOLR and may conduct independent research in a related field.

Requirements: The applicant should hold a Master's/Ph.D. degree in natural or exact sciences with computing and analytical capabilities, and experience in marine data. Advantages: PhD, post-doc, experience in the scientific field.

The successful candidate will be positioned at the National Institute of Oceanography (Haifa), IOLR.

Applications should be submitted with a CV, list of publications, degree certificates and the contact information of at least 2 referees. Send your application by e-mail to Lea Teitelbaum (lea@ocean.org.il) by July 30, 2019. More information about IOLR can be found at www.ocean.org.il.
